

# Megharth Lakhataria

Boston, MA · lakhataria.m@northeastern.edu · (857) 869-4576 · github.com/megharth

## Education

### Northeastern University, Khoury College of Computer Sciences

Masters Computer Science **GPA: 4.0/4.0**

*Relevant Coursework: Web Development, Computer Systems*

Boston, MA

Sep 2019 - Present

Expected Graduation: Spring 2021

### Gujarat Technological University

Bachelors of Technology Information Technology **GPA: 9.17/10.0**

*Relevant Coursework: Software Engineering, Data structures*

Gujarat, India

Aug 2015 - May 2019

## Skills

<b>Programming Languages</b>	Javascript, C, C++, Java, Python, HTML5, CSS3
<b>Databases</b>	SQL, Postgres, MySQL, MongoDB
<b>Libraries &amp; Frameworks</b>	Vue.js, Vuex, Elixir, Node.js, ExpressJs, React.JS, Redux, jQuery, Bootstrap, Laravel
	Socket.io, GSAP, Handlebars
<b>Tools</b>	GIT, Agile (Scrum), Nginx, IntelliJ IDEA, Visual Studio Code, Raspberry Pi, Inkscape, Heroku

## Experience

### Voda.ai, Boston

*Full stack intern*

August 2020 - Present

- Designing and optimizing Web UI interface for Voda's product interaction with customers using Javascript (ES6), React and ESRI's ArcGIS API for Javascript
- Proposed solutions for storing the data of client and Voda's proprietary data for Voda's machine learning and hence setting up and maintaining databases for the same
- Implementing new security features and optimizing the current ones to protect and secure the sensitive data owned by Voda

### Northeastern University, Boston

*Graduate Teaching Assistant, CS 5600 - Web Development*

May 2020 - August 2020

- Conducted office hours to help students with their doubts and mentor them on topics related to web development
- Assisted professor with grading assignments and classroom logistics

### Alian Software, Anand, India

*Web dev intern*

Jan 2019 - May 2019

- Developed content management system and inventory management system alongside the integration of Amazon Marketplace API increasing on-time order fulfilment rate by ~15%
- Created a customer management system providing required information to a customer representative at centralized place improving customer response time by 9%
- Extracted metadata from the image and converted GeoTIFF image into web-optimized PNG images reducing rendering time of image on Google Maps by 35%

## Projects

### Bucket Allocator C, linux & XV6 systems

- Engineered a custom bucket allocator that can out-perform both XV6 and linux's default allocator
- Created 64k thread safe buckets structure to allocate, re-allocate and free the memory

### Social React.JS, Elixir, CSS3, Postgres SQL

- Built a social media website that suggests potential friends based on location and similar interests
- Used geolocation API, Mapbox, Facebook & Instagram API to establish the key elements

### Checkers React.JS, Elixir, CSS3, Postgres SQL

- Implemented a multiplayer Checkers web-game with chat-room and game-room support
- Features multiple games, game backups and minimal lag using Elixir genservers & sockets

### Image Processing App Swing, Java, Junit

- Designed a MVC app that can generate images and process pre-existing or generated images
- Utilized k-means clustering of pixel and modification of its RGB channel to create different filters and color transforms

## Leadership Experience

### Developer Head

*BVM Engineering College*

Jul 2018 - May 2019

- Delegated tasks as well as evaluated individual deliverables by using scrum methodology to achieve maximum efficiency for every app developed throughout the year
